

## IMAGINiT Utilities for Vault Client

Many organizations use Autodesk® Vault for their data management needs. While it works well and provides many valuable tools, there are certain workflows which are manual and/or impossible for non-CAD users. IMAGINiT Utilities for Vault Client addresses some of these pressing needs of Vault Client users.

The tool runs directly inside Autodesk Vault products and is free to clients who are annual subscribers of Autodesk products through IMAGINiT. Ask your representative for additional details. Now Compatible with Autodesk 2021 products. IMAGINiT Utilities for Vault Client include:

- **STEP:** Create STEP files on-demand or on lifecycle transition
- **Command Visibility:** Hide utilities you don't want your users to access.
- **Update Folder from Template:** Update a folder to match a template folder.
- **Link Generator:** Retrieve URL links to the Vault Thin Client for selected files or items, making it easy to send information to others.
- **Auto-Update Folder Properties to File Properties:** Quickly synchronize properties applied at the folder level to corresponding properties at the file level.
- **Create Local Folders:** Create folders in the Vault working folder hierarchy to match the Vault folders.
- **Visual Lifecycle Tab:** Provide a visual description of the current file's lifecycle definition, including its current state as well as the available transitions to other states.
- **Standard Folders:** Enables the administrator to configure folders of standards to update whenever someone logs into Vault. Provides support for Administrative-only templates and for forcing a get-latest on single folders.
- **Lifecycle Change Notifier\*:** Provides an email notification when your project has lifecycle state changes and allows support for reporting properties in the Lifecycle Notification setup.
- **Create Folder from Template:** Quickly and easily set up complex project folder structures with the click of a button. Setup multiple templates per project and office standards.
- **Extract Bill of Materials (BOM):** Create a BOM within Vault, based on your CAD data and export to Excel or CSV.
- **Create PDF/DWG/DXF:** Generate PDFs from Inventor IDW and DWG files at the press of a button using the Job Processor. The PDFs can be stored in the Vault or published to an external folder. Auto-generate jobs based on key lifecycle events. PDFs can be created on-demand or automatically as product lifecycles change. Includes new job types for making DWG and DXF files from IDW files and provides support for publishing PDFs on lifecycle changes outside of the Vault.
- **Batch Checkout of Files\*\*:** Simple method of checking out multiple files at once.

\* This utility only available in Utilities for Vault Client 2015 - 2021.

\*\* This utility only available in Utilities for Vault Client 2014 - 2021.

### Developed by the Autodesk Vault Experts at IMAGINiT Technologies

As an Autodesk® Authorized Developer, IMAGINiT experts have years of experience delivering tools to help clients bring organization and security to their data. From manufacturing clients to civil engineering firms and government agencies, clients rely on our data management experts to streamline processes and make efficient use of their data.

Developed by IMAGINiT's Software Development group in conjunction with IT and engineering professionals, you can rest assured that all your design and drafting data is safe, secure, and well-managed with Autodesk Vault and IMAGINiT Utilities for Vault Client.
